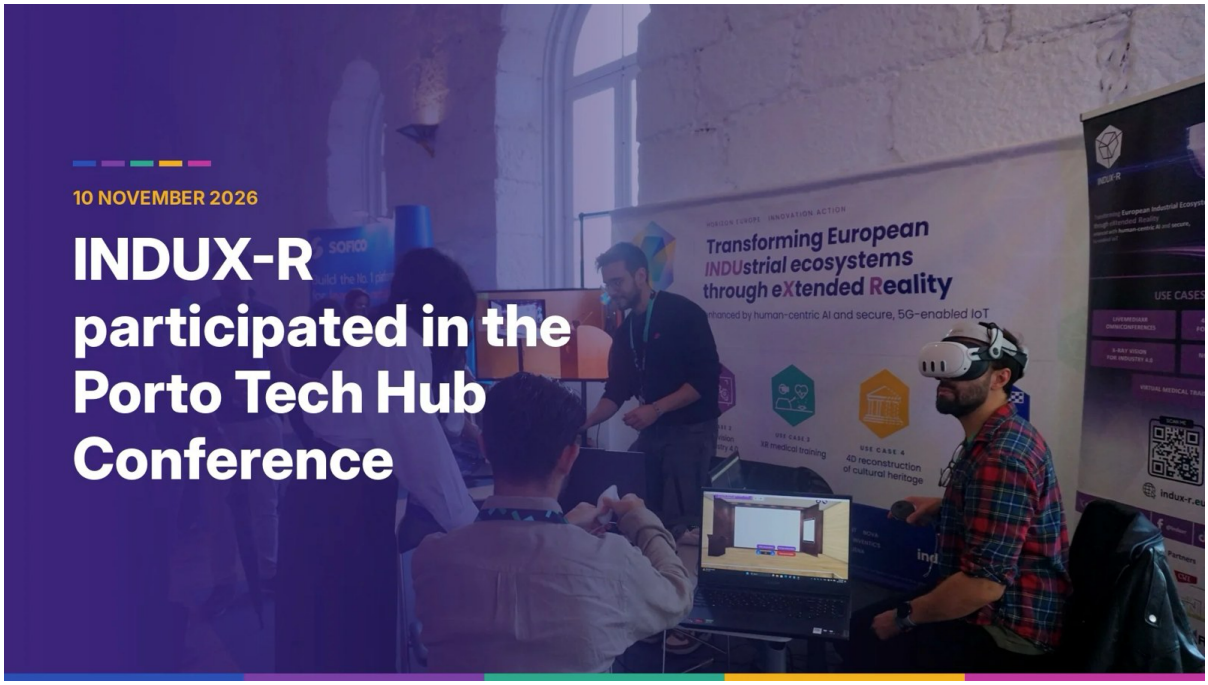
PRESS RELEASE

Porto, Portugal | 10 November 2026

INDUX-R

INDUX-R participated in the Porto Tech Hub Conference



INDUX-R participated in the Porto Tech Hub Conference on 10 November 2026, where the XR Omniconference application was presented and evaluated by more than 50 attendees.

Participants had the opportunity to explore the hybrid conference experience at their own pace, using smartphone-based Augmented Reality (AR) to network with other attendees at the venue and Virtual Reality (VR) headsets to attend conference sessions, deliver presentations, and interact with both in-person and remote participants.

The evaluation provided valuable insights into how attendees interacted with the application in a real conference setting, focusing on:

- **Hybrid networking:** How participants connected and interacted across AR and VR environments.
- **Conference participation:** How attendees used different features, from joining presentations to participating in discussions.
- **User engagement:** Which features attracted the most interest when participants were free to explore the application at their own pace.

Preliminary results from the user questionnaires indicate high overall satisfaction among attendees.

– ENDS –

About INDUX-R

INDUX-R (Transforming European INDUstrial Ecosystems through eXtended Reality enhanced by human-centric AI and secure, 5G-enabled IoT) is a Horizon Europe-funded initiative involving partners from across Europe. Its mission is to redefine how people interact, train, and collaborate in professional environments through cutting-edge XR applications rooted in ethical development.
